A hand-drawn diagram of a chromosome, likely a polytene chromosome, showing four distinct bands. The bands are labeled as follows:

- Lm 18338**: Located on the left side, associated with the first (top) band.
- Lm 16.898**: Located on the right side, associated with the second (orange) band.
- LS**: Located at the bottom right, associated with the third (orange) band.
- PS**: Located at the top right, associated with the fourth (green) band.

The chromosome is represented by a horizontal line with four colored segments: a top green segment, followed by an orange segment, then a green segment, and finally an orange segment at the bottom. The labels are written in blue ink.
